LIST LEMUR

☑ My current & upcoming topics

Exam A: Topic 1 ✎
- 1h Do this
- 1h Do that
- 1h Do that 2

Exam B: Topic x ✎
- 1h Do this
- 1h Do that
- 1h Do that 2

Exam A: Topic 2 ✎
Task list is empty!

Exam B: Topic y ✎
Task list is empty!

◎ View all future tasks set

What happens when you reorder the topics such that they are not upcoming anymore?
They would be visible when you tap on "View all future tasks set" at the bottom of the screen. They would be appended to the bottom of the main list but the banner colour would be grey and there would be no pencil icon - so the list is locked until it's reopened.

- LL shows a list of "OPEN" and uncompleted topics, i.e. currently relevant ones.
- This is a place where tasks for the topics are set up or edited.
- New: The tasks CANNOT be ticked off from this page.
- Only UNCOMPLETED tasks are shown here
- When all tasks for a topic have been completed then that topic is removed from this page.
- The banner where the exam and topic names are shown are different colours depending on whether the tasks have been set up or not yet.
- Tapping on any area of the list should bring up the black page shown on the right here.
- The export button exports the list as CSV in one column.

Tapping on the 'Study Planning tip' brings up this popup:

🦁 Study planning tip:

Can't think of any tasks? Build it around your study material, e.g. "Read pages 1-100 book x" , "Do past paper y".

You can always come back and adjust it as you figure out your study preferences along the way.

You can copy a task list from an older topic to avoid entering it again.

If you have more tasks than the number of hours available to this topic, it's fine to add 0 hour tasks. Otherwise you can add/remove hours from this topic by TAPPING HERE.

Tapping on anywhere outside the box will make it go away.
Tapping on 'TAP HERE' brings up this next popup:

Changing hours for a topic

[____] hours

Apply change in hours to:

This topic only   **All future topics in this exam**

You will need to add
3
more study hours a week in your regular timetable to do this.

Cancel   **Go to Regular Timetable**

The number of hours can between -10 and +10 but the reduction is limited to the difference between number of hours scheduled and available.
NEW: Apply change to "this topic only" is a separate calculation. It is done at the expense of future topics. Once done a popup to say 'x hours have been added to this topic' then it returns to the task adding page.
Selecting "All Future topics..." brings up the popup on the right.

Exam B: Topic x

Here you can break this topic down into practical tasks to be done in any order.

| ⧖ | Total available: | 3 hours |
| | Total scheduled: | 3 hours |

Tasks	Hours
Do this	1 h
Do that	1 h
Do that 2	1 h

? Study planning tip

- The blue figure shows the number of hours available for this topic and it's static within this purpose.
- The red number increases as more tasks are added and hours allocated to them.
- Tapping on the red '+' icon asks how many lines to add first then you have to tap on the individual cells to add a task name and allocate hours.
- Ideally the task names can be selected from a list of old ones already used, kind of like predictive texting.
- The hours should be capped to the total available, i.e. if all hours have already been used up then it can only be 0h for the next task.
- Any tasks already completed is locked down and striked through.

- If less than available hours have been allocated then a popup should appear on hitting 'Save' that says "You haven't used up all available hours for this topic. Are you sure you want to continue?". If Yes then the remaining hours should be allocated to a task called 'Task Not Set' by default. This is also the case if user decides to not use this feature here and starts studying anyway.
- When pressing 'Save' a popup to say "Great, you have just added x hours of worth of tasks."
  What does it mean by "OPEN" topics?
- For each topic the user is encouraged to break the topic down into practical 'tasks'. This can only be done in stages. When you set up the exam for the first time then only the first topic is 'OPEN' and so will appear in LL to have the tasks set up. As soon as you make progress on the first topic then Topic 2 will 'OPEN' and appear in LL for the user to set up the tasks.
- It may be that the topics are really short so the user might be starting more than 1 topic in the next day or so. For this reason, any topics that are due to start in the next 3 days should also be 'OPEN'.
